

Introduction

Visitor Management System (VMS)

Solution Overview

The long queues and staffs required to conduct temperature screening is very unnecessary and our solution aims to address that issue.

With our Visitor Management System, no manpower is needed to operate the system as we are deploying an automated contactless temperature scanner. Visitors can take their temperature and sign in to Safe Entry all within one scan of QR code.

Our contactless temperature sensor is integrated with a backend system to record down the temperature and time of entry for system administrator to monitor from our web application.

Why employ a VMS?

Better Efficiency

- ▶ Traditional paper-based system is wasteful and can get messy. A lot of time is wasted on filling up forms and manual temperature scanning.

Improve Visitor Experience

- ▶ Absence of a queue will allow visitors to be processed quickly allowing for better business flow as well.

Health & Safety

- ▶ Our top priority at the end of the day is the health and safety of our visitors. Our system allows you to monitor real-time traffic flow of visitors and employees.

Summary

Our solution aims to eliminate the need for manpower to conduct temperature screening before entering any establishment. And provide real-time monitoring of visitors and employee to better manage human traffic and improve business flow.

Key Features

- ▶ Alerts
- ▶ Entry Records
- ▶ Safe Entry
- ▶ Contactless Temperature Screening

Additional Features

- ▶ Integrate to existing system
